

Is This the Way You Inventory Your IT Hardware?

Need An Enterprise-Level Solution Without the Enterprise Pricing?

Does your IT organization struggle with hardware and software inventory and management in a constantly evolving business environment. *Ask yourself this –*

- √ Is your IT inventory accurate?
- √ Do you have an accurate count of software licenses?
- √ Do you understand the consequences of under- or over-licensing software, in terms of dollars and fines?
- √ Are you confident your PCs have the latest in patches and vulnerability protection?

If you answered no to any of these questions, you are probably typical of most enterprises. So what can a small-to medium-sized business do to address these challenges, with only a minimal investment?

What if you could address all these challenges, for one low, fixed price, delivered, in three weeks' time? Think your organization can't possibly afford it? Think again.

Evergreen's HP CAS Express Start Offer

Evergreen Systems' Client Automation Standard Express Start can offer you a solution, at much less than enterprise-level pricing. *For \$19,500, look at what you'll get:*

- Complete inventory of network-connected IT devices
- Complete software/hardware inventory to 2000 devices*
- Client installation, vulnerability assessment and patching for up to 2000 devices

The system includes total OS management and provisioning:

- Web-based management console that provides desktop management and control
- Software license usage management and metering
- Automated software distribution
- Single image capture and deployment for training and knowledge transfer
- Patch and compliance management, including software deployment and compliance reporting
- Automated ongoing deployment of software, patches and operating systems

Evergreen can deliver all this to your IT organization in three weeks' time, for only \$19,500.**

The value of having all your IT devices mapped and up to 2000 devices software inventoried and patched to current release levels is worth more than the offer price alone.

Can You Afford To Say "No" To Express Start?

You can't afford *not* to seriously consider Evergreen's Client Automation *Standard Express Start*. Consider the consequences of not addressing your hardware and software inventory issues:

- *Software audits that reveal out-of-compliance licensing* can lead to fines and loss of future pricing discounts, as well as a loss of credibility to your IT organization.
- *Poor hardware lifecycle management that results in inefficient utilization of assets* and higher maintenance, repair and new equipment expenditure.
- *Security threats and vulnerabilities caused by poor patch management* that results in countless hours of lost productivity and system failures.
- *End users that are continually frustrated by machine and application malfunctions* as result of poor software application management and little or no hardware lifecycle management.
- *Help desk personnel unable to keep up with trouble tickets* due to IT changes that are not managed through all systems.

No matter the size of your organization, these can be serious issues, especially for IT organizations already stretched thin for resources. And the increase in mobile work forces, security threats and compliance makes manual IT inventory methods practically impossible.

*Customer must provide access to enterprise network for discovery.

**Pricing includes services only, no software license fees. Travel expenses are charged as incurred.

Let *Express Start* Organize Your Hardware and Software Inventory Start To Finish—In Three Weeks

This is how it works:*

- √ An Evergreen HPCA certified engineer comes to your site and sets up software that 'discovers' all IT devices, including PCs, servers and network hardware within your network.
- √ Our discovery process will inventory hardware and software for up to 2000 PCs, by hardware type, model and software version and revision level.
- √ We conduct a patch vulnerability assessment and patch your operating systems to the latest approved revision level, up to 2000 machines.
- √ We demonstrate to you and your staff effective and proactive software license usage management and metering methodology using HP Client Automation Standard.
- √ We help you automate the management of your desktop environment, including software distribution, ongoing patch control and hardware lifecycle management.

In three weeks' time, you have a complete IT infrastructure inventory, a vulnerability and patching assessment and detailed knowledge of software as well as patching to the latest releases for up to 2000 PCs, *for only \$19,500, half of which is refundable towards software licensing fees if you act now.**

With *Express Start* You Get the Team

Despite the accelerated timeframe and the low fixed price, Evergreen will manage your *Express Start* project the way Evergreen manages all projects, with:**

- √ Oversight from an Evergreen HPCA certified professional
- √ Your team's participation in kick-off meetings, installation plan reviews and a detailed implementation.
- √ Project delivery and completion augmented by a detailed inventory, security and patch report with detailed gap analysis.

*Ask your HP hardware representative for more details on software licensing.

**Ask your HP hardware rep to show you a sample statement of work for offer.

Your Team Is In the Loop Every Step of the Way

Your team is kept in the loop through every step of the process, including:

- √ Validation and configuration of Client Automation Standard core components
- √ Policy integration with Active Directory
- √ Installation and configuration of Client Automation Standard publishing tools
- √ Installation and configuration of all reporting components
- √ Database configuration of inventory and patch databases on SQL server
- √ Detailed device discovery
- √ Client Automation Standard agent deployment of up to 2000 devices
- √ QA per Evergreen best practices
- √ Unit, infrastructure and patch testing
- √ Verification of proper operations with the IT team

Ask your HP hardware sales representative for a no-fee evaluation of how Evergreen Client Automation Standard Express Start can benefit your organization. Act now and qualify for a 50% rebate towards software licensing.

Evergreen Systems is an HP Platinum reseller and expert consulting firm in the areas of ITIL, ITSM, Client Automation and Data Center Automation process improvement and automation. Evergreen was named HP Enterprise Software Emerging Partner for 2008.

"As a top vendor in the IT management market, HP understands what enterprises need from their management solutions."
