

Are you considering entering the “cloud”?

Now's the time to start thinking about cloud security.

Lunarline's Cloud Security Consulting Services include:

- ◇ Development of high-level cloud computing security strategy
- ◇ Collaborative sessions with key stakeholders
- ◇ Identifying the risk gap between your traditional processing options and cloud deployment models
- ◇ Guidance and education on critical security considerations
- ◇ Security hardening, testing, and validation for all cloud components
- ◇ Best practices for a secure cloud environment

Cloud computing represents one of the most significant and exciting changes in technology since the emergence of the internet. Lunarline's Cloud Security Consultants will develop a cloud security strategy roadmap designed to guide you through the security and privacy concerns of cloud computing and help you implement a secure cloud strategy.

Our cloud security assessment will give you a complete analysis of the security status of your current or planned private or public cloud solution. We will evaluate the effectiveness of your proposed cloud security solution, identify the strengths and vulnerabilities within an existing cloud security program, and recommend steps to help improve security posture. The services include analysis of current security posture, a gap analysis against best practices and specific security objectives and documentation of findings and recommendations.

Contact us today and find out why several Federal and commercial customers with *highly sensitive* and *critical* data have chosen **Lunarline** for secure cloud solutions and consulting.
