

Mobile Device Security

- ◇ Secure mobile devices your employees use to access your network
- ◇ Be ISO 27001, NIST 800-53 Revision 3, and DoD 8500.2 compliant
- ◇ Continuously monitor your entire mobile device infrastructure for security or privacy relevant events

Lunarline can work with you to develop a risk based infrastructure to meet your system, compliance, and budget needs.

Today's mobile devices are exponentially more powerful and complex than those of just a few years ago. This complexity combined with the increase in inexpensive bandwidth and millions of available applications mean that more people are using mobile devices for more complex tasks which include access to a vast array of corporate information and applications. The risk of losing valuable data or exposing corporate systems to unauthorized access or compromise has been considerably amplified.

Lunarline's Mobile Security experts will work with you to identify the security risks presented by enhanced mobility—and develop various options for addressing these risks. Our consultants are knowledgeable in the legal and regulatory requirements and best practices needed to protect access to critical data and other assets on all the major platforms deployed in the enterprise. We fully understand the significance of the risks mobile devices present and have experience working with all the major mobile device management solutions and will implement the one that best meets an organization's security requirements.

Contact us today to learn more about how **Lunarline** can work with you to help protect mobile devices and applications from unauthorized access and malicious activity, while still providing a rich experience for the mobile workforce.
